

DevOps Attache`/Intern Schedule

WEEK 2	FROM STUDENT TO PRACTITIONER
Goal	The Practitioner's Loop.
Objective	Rebuild the "Silicon Savanna" portfolio without high-level abstractions.
Constraints	Backend: Vanilla python, go lang or PHP or very minimal backend framework with justification why. Frontend: Strictly Vanilla HTML5, CSS3, and JS : Minimal Bootstrap/tailwind. No Angular, Svelte or React
Author	Nicholas Karimi

#	FOCUS	TASK/DELIVERABLE
Day 1	The Great Gutting/Stripping it down	Delete your previous framework. Initialize a feature/bare-metal branch. Begin converting your Figma design into vanilla HTML/CSS.
Day 2	Manual Routing	Build a manual router. /, /about, /projects. If a user hits /about, or any other route, the code must serve the requested page.
Day 3	State & Forms	Build a Contact form Handle POST manually Validate inputs
Day 4	The Web Server	Configure local Nginx/Apache OR minimal HTTP server Access via browser like a real app Or deploy using static pages such as github pages, netfly etc.
Day 5	The Comparison	Submit PR with: - Working bare-metal/vanilla version - Documentation: what the framework was doing - Reflection: what you learned
